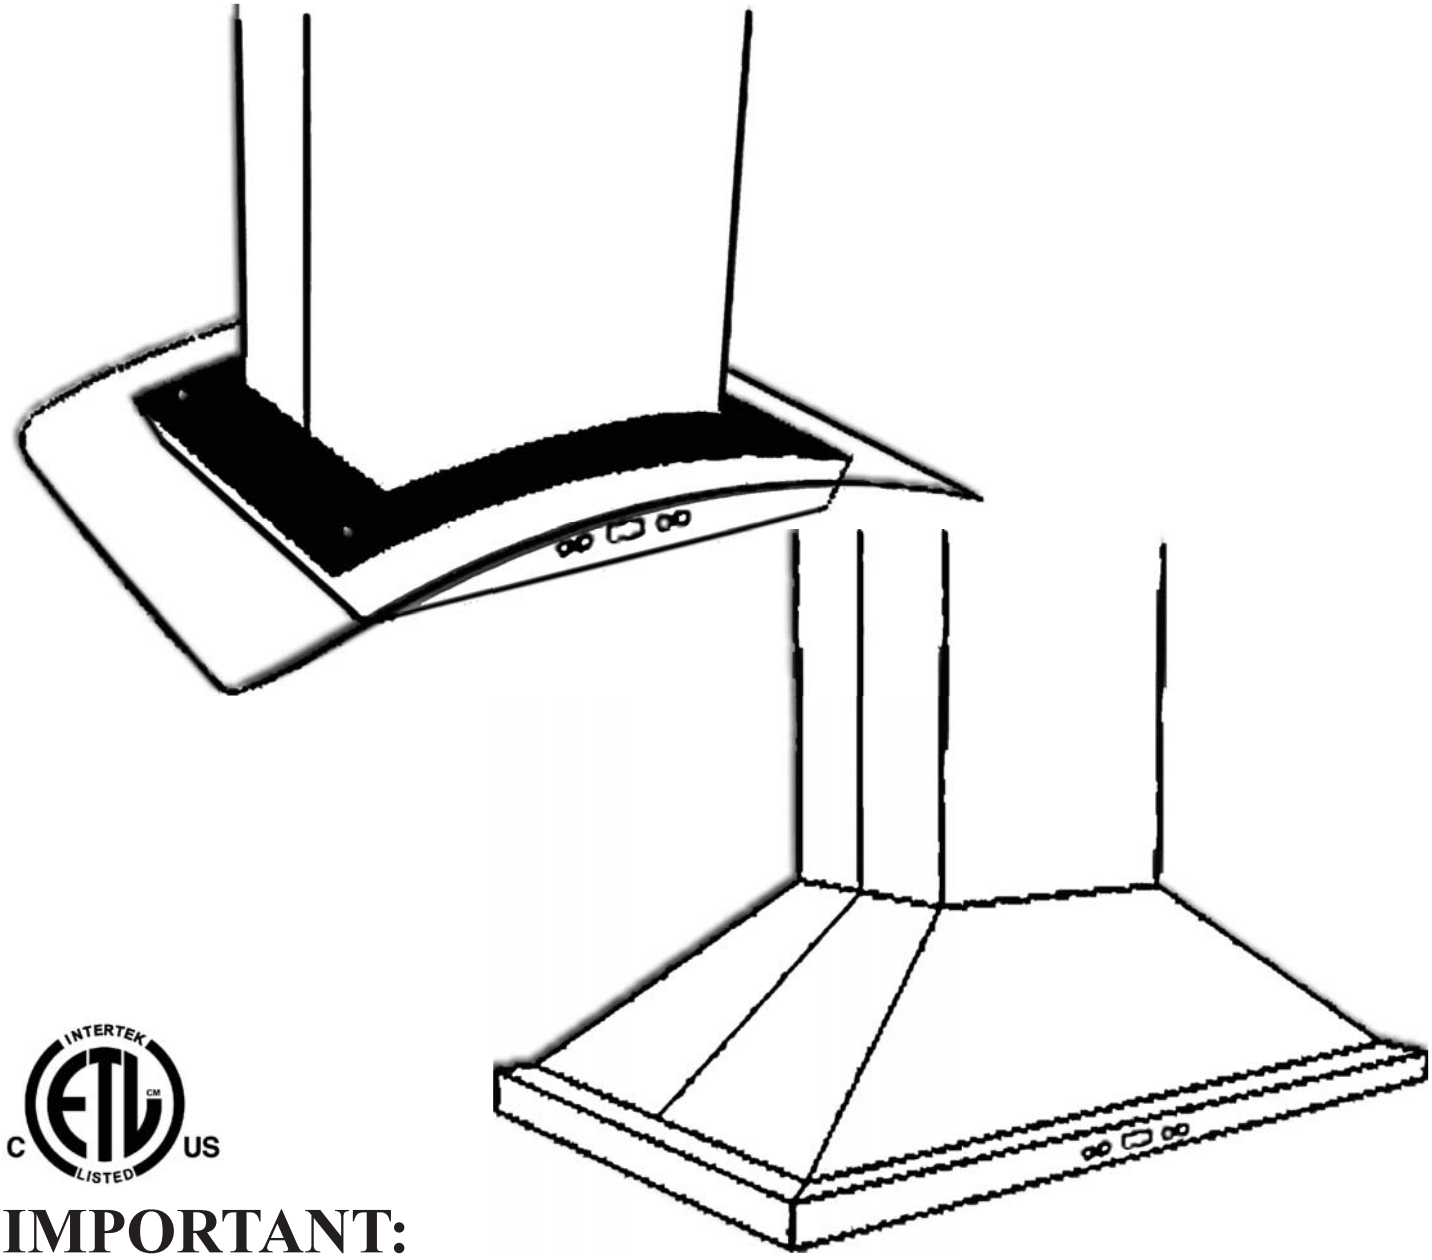
Installation Guide and Users Manual

SPAGNA VETRO 218 Series



IMPORTANT:

Read and save these instructions.

NOTICE:

Installer: Leave this guide with the homeowner

Homeowner: Keep this guide for future reference

Island Mount Range Hood

Important Safety Notice

Read all Instructions before Installing and operating this appliance

- The installation in this manual is intended for qualified installers, service technicians or persons with similar qualified background. Installation and electrical wiring must be done by qualified professionals and in accordance with all applicable codes and standards, including fire-rated construction.
- DO NOT attempt to install this appliance yourself. Injury could result from installing the unit due to lack of appropriate electrical and technical background.
- Range hood may have very sharp edges; please wear protective gloves if it is necessary to remove any parts for installing, cleaning or servicing.
- Activating any switch ON before completing installation may cause ignition or an explosion.
- Due to the size and weight of this range hood, two people installation is recommended.

To reduce the risk of fire, electric shock, or injury to persons:

- For general ventilating use only. DO NOT use to exhaust hazardous or explosive materials and vapors.
- The combustion air flow needed for safe operation of fuel-burning equipment may be affected by this unit's operation. Follow the heating equipment manufacturer's guideline and safety standards such as those published by the National Fire Protection Association (NFPA), and the American Society of Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and the local code authorities.
- Before servicing or cleaning unit, switch power OFF at service panel and lock service panel to prevent power from being switched ON accidentally.
- Clean grease laden surfaces frequently. To reduce the risk of fire and to disperse air properly, make sure to vent air outside. DO NOT vent exhaust into spaces between walls, crawl spaces, ceiling, attics or garages.
- Ducted fans MUST always be vented to the outdoors.
- Use only metal ductwork and this unit MUST be grounded.
- Sufficient air is needed for proper combustion and exhausting of gases through the duct to prevent back drafting.
- When cutting or drilling into wall or ceiling, be careful not to damage electrical wiring or other hidden utilities.
- All electrical wiring must be properly installed, insulated and grounded.
- Old duct work should be cleaned or replaced if necessary to avoid the possibility of a grease fire.
- Check all joints on duct work to insure proper connection and all joints should be properly taped.
- Use this unit only in the manner intended by the manufacturer. If you have questions, contact the vendor.

To reduce the risk of a stove top grease fire:

- Keep all fan, baffle, spaces, filter, grease tunnel, oil container and grease-laden surfaces clean. Grease should not be allowed to accumulate on fan, baffle, spaces, filter, grease tunnel and oil container.
- Always turn range hood ON when cooking at high heat or when cooking flaming foods.
- Use high settings on cooking range only when necessary.
- Never leave surface units unattended at high settings. Boil overs cause smoking and greasy spillovers that may ignite. Heat oils slowly on low or medium settings.

Important Safety Notice

Read all Instructions before Installing and operating this appliance

- Clean ventilating fan frequently.
- Always use appropriate cookware and utensils size.
- Always use cookware appropriate for the size of the surface element.

To reduce the risk of injury to persons in the event of a stove top grease fire:

- SMOTHER FLAMES with a close-fitting lid, cookie sheet, or metal tray, then turn OFF the burner. BECAREFUL TO PREVENT BURNS. NEVER PICK UP A FLAMING PAN—you may be burned. KEEP FLAMMABLE OR COMBUSTIBLE MATERIAL AWAY FROM FLAMES. If the flames DO NOT go out immediately, EVACUATE AND CALL THE FIRE DEPARTMENT or 911.
- DO NOT USE WATER, including wet dishcloths or towels — a violent steam explosion will result.
- Use an extinguisher ONLY if:
  - You know you have a Class A, B, C extinguisher, and you already know how to operate it.
  - The fire is small and contained in the area where it is started.
  - The fire department is being called.
  - You can fight the fire with your back to an exit.

To reduce the risk of injury to persons in the event of a gas leaks:

- Extinguish any open flame.
- DO NOT turn on the lights or any type of appliance.
- Open all doors and windows to disperse the gas. If you still smell gas, call the gas company and fire department, or 911 immediately.

Your safety and the safety of others is very important. We have provided many important safety messages in this manual and on your appliance. Always read and obey all safety messages. All safety messages will tell you what the potential hazard is, tell you how to reduce the chance of injury, and tell you what can happen if the instructions are not followed.

WARNING

This is the safety alert symbol. This symbol alerts you to potential hazards that can hurt you and others. All safety messages will follow the safety alert symbol and the word “WARNING”.

Euro-Kitchen, Inc. declines all responsibility in the event of failure to observe the instructions given here for installation, maintenance and suitable use of the product.
Euro-Kitchen, Inc. further declines all responsibility for injury due to negligence and the warranty of the unit automatically expires due to improper maintenance.
Euro-Kitchen, Inc. will not be held responsible for any damages to personal property or real estate or any bodily injuries whether caused directly or indirectly by the range hood.

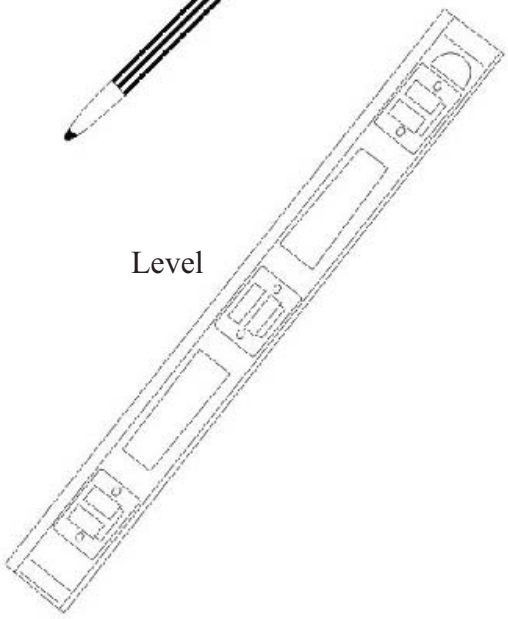
Tools needed:

Marker or pencil



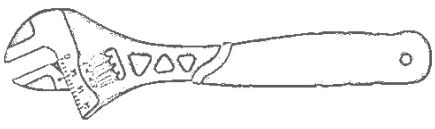
Level

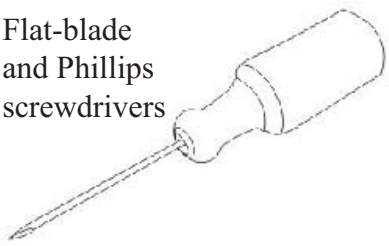
Utility knife

Powered screwdriver or drill

Measuring tape

Adjustable Wrench

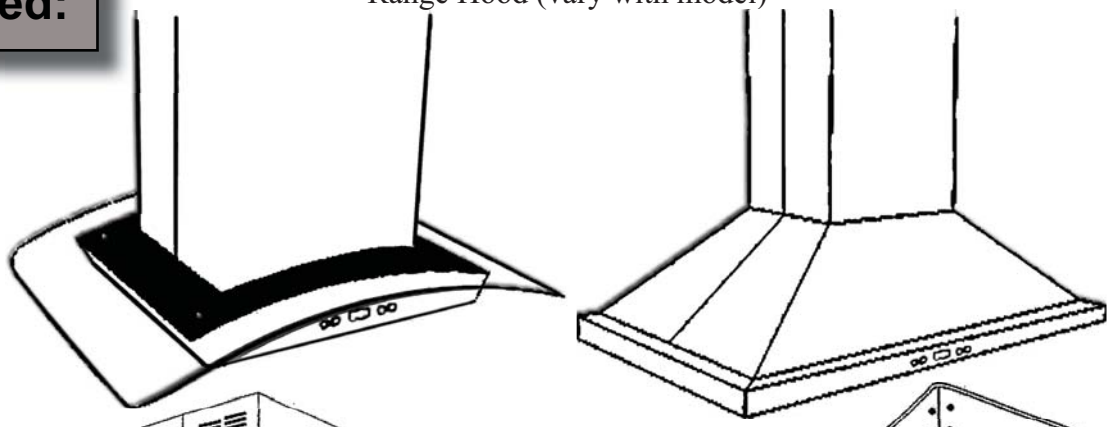


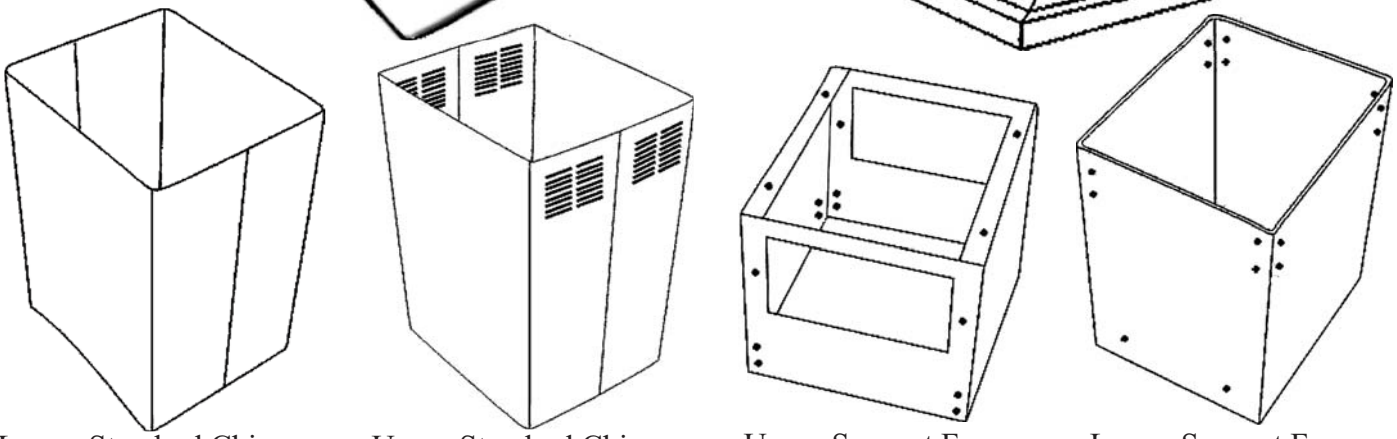


Flat-blade and Phillips screwdrivers

Parts supplied:

Range Hood (vary with model)





Lower Standard Chimney

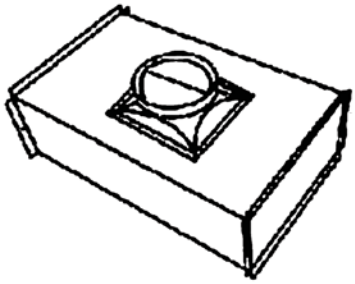
Upper Standard Chimney

Upper Support Frame

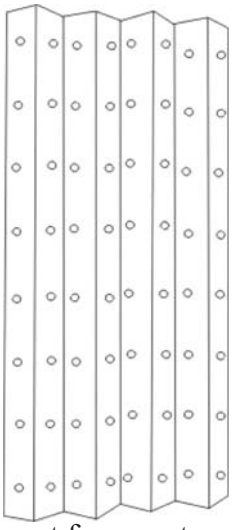
Lower Support Frame

A
Qty: 4 PCS

D
Qty: 4 PCS
(Optional with re-circulating kit. Pre-installed when kit ordered together with range hood)



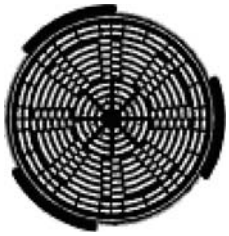
Air Diverter
(Optional re-circulating kit, pre-installed when ordered together with range hood)



Support frame extension
(Length varies with ceiling height)

B
Qty: 36 PCS

C
Qty: 36 PCS

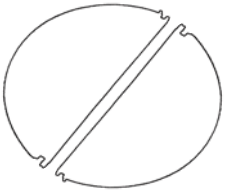


Charcoal filter
(Optional re-circulating kit, pre-installed when ordered together with range hood)

Grease/Oil Cup

Glass Canopy Screw
Qty: 4 PCS
(Optional with glass canopy)

Hex Key
Qty: 1 PCS
(Optional with glass canopy)



Flappers

Flexible Duct Tube

Venting Requirements

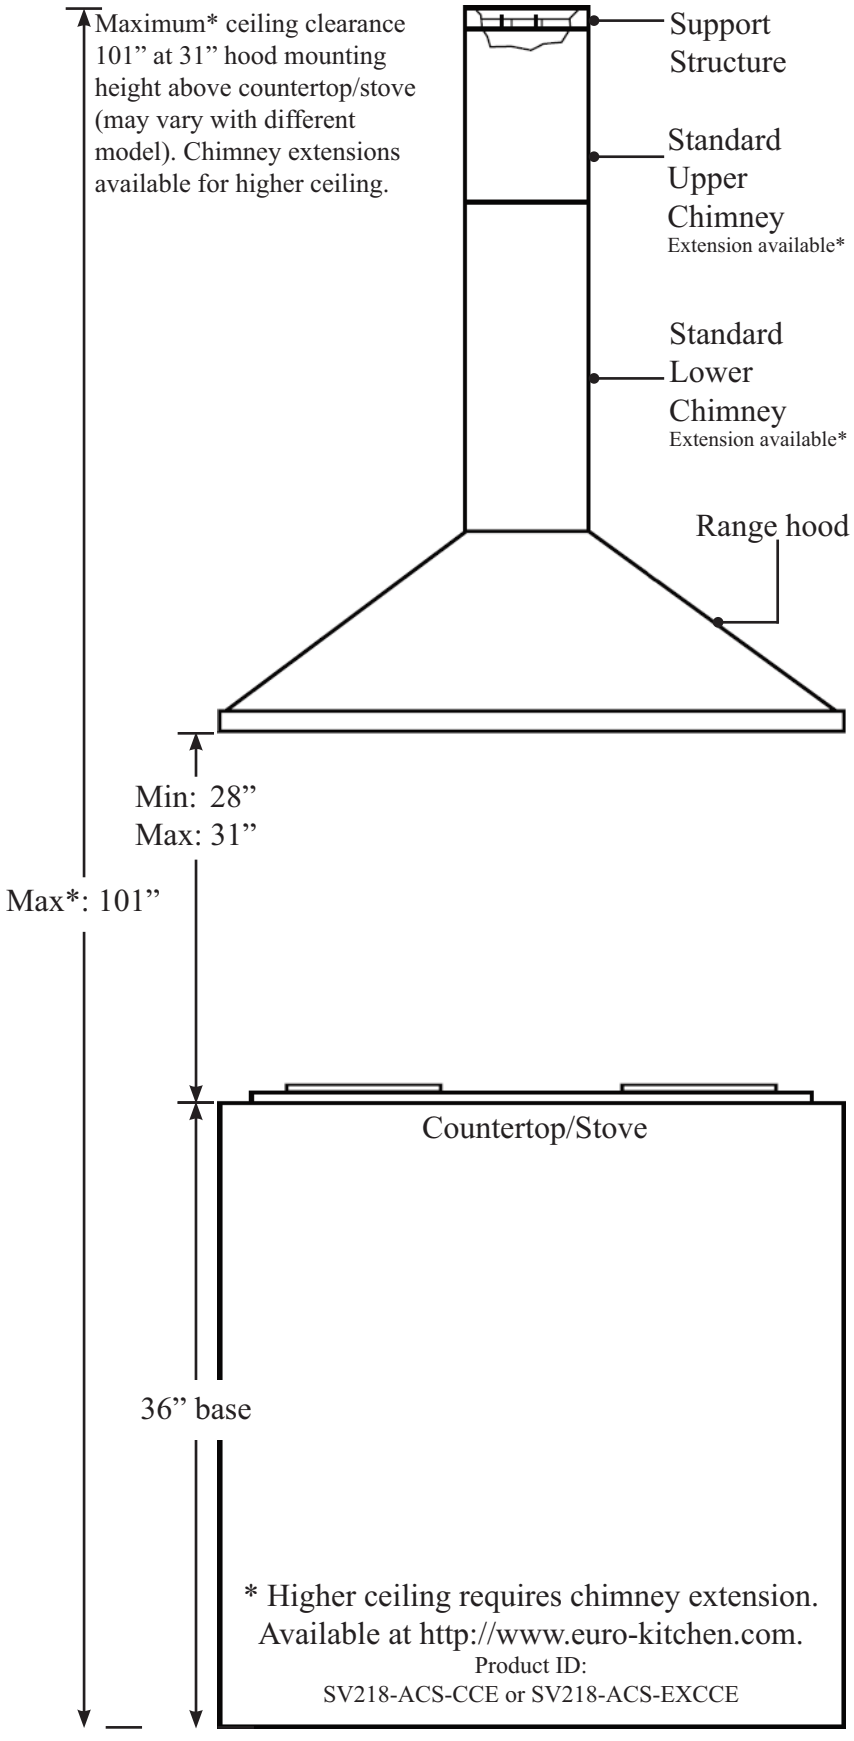
- Vent system must terminate to the outside (roof or side wall).
- DO NOT terminate the vent system in an attic or other enclosed area.
- DO NOT use 4” (10.2 cm) laundry-type wall caps.
- Use metal/aluminum vent only. Rigid metal/aluminum vent is recommended.
- DO NOT use plastic vent.
- Always keep the duct clean to ensure proper airflow.
- Calculate the following figures before installation:
  1. *Distance from the floor to the ceiling.*
  2. *Distance between the floor to the countertop/stove.*
  3. *Distance between the countertop/stove to the range hood (recommend* 28” to 31”).*
  4. *Height of hood and duct cover.*

For the most efficient & quiet operation:

- A distance of 28” to 31” is recommended* between stove top and the bottom of range hood.
- It is recommended that the range hood be vented vertically through the roof through 6” (17.8 cm) or bigger round metal/aluminum vent work.
- The size of the vent should be uniform.
- Use no more than three 90° elbows.
- Make sure there is a minimum of 24” (61 cm) of straight vent between the elbows if more than one elbow is used.
- DO NOT install two elbows together.
- The length of vent system and number of elbows should be kept to a minimum to provide efficient performance.
- The vent system must have a damper. If roof or wall cap has a damper, DO NOT use damper (if supplied) on top of the range hood.
- Use silver tape or duct tape to seal all joints in the vent system.
- Use caulking to seal exterior wall or roof opening around the cap.

* Due to different ceiling height configurations, recommended height may not be applicable.

Height & Clearance



IMPORTANT:

- A minimum of 6” round (standard for this range hood) or 3-1/4 x 10” rectangular duct (purchased separately) must be used to maintain maximum airflow efficiency.
- Flexible 6” round duct provided for convenience, always use rigid type metal/aluminum ducts if available to maximize airflow when connecting to provided duct.
- Please use *Duct Run Calculation* below to compute the total available duct run when using elbows, transitions and caps.
- ALWAYS, when possible, reduce the number or transitions and turns. If long duct run is required, increase duct size from 6” to 7” or 8”. If a reducer is used, install a long reducer instead of a pancake reducer. Reducing duct size will restrict airflow and decrease airflow, thus reduce duct size as far away from opening as possible.
- If turns or transitions are required: Install as far away from opening and as far apart, between 2, as possible.
- Minimum mount height between stove top to hood bottom should be no less than 28-inch*.
- Maximum mount height between stove top to hood bottom should be no higher than 31-inch*.
- It is important to install the hood at the proper mounting height. Hoods mounted too low could result in heat damage and fire hazard; while hoods mounted too high will be hard to reach and will loose its performance and efficiency.
- If available, also refer to stove top manufacturer’s height clearance requirements and recommended hood mounting height above range.

  * Due to different ceiling height configurations, recommended height may not be applicable.

Minimum Duct Size:

- Round - 6” minimum
- Rectangular - 3-1/4 x 10” minimum (requires a 6” to 3-1/4x10” adaptor, not supplied)

Calculating vent system length

To calculate the length of the system you need, deduct the equivalent feet for each vent piece used in the system from the recommended maximum duct run.

Duct Run Calculation:	
	Recommended maximum run
6” or 3-1/4 x 10” duct	50 ft
	Vent piece deduction
Each 90º elbow used	9 ft
Each 45º elbow used	5 ft
Each 6” to 3/14 x 10” transition used	7 ft
Side wall cap with damper	0 ft
Roof cap	0 ft

Duct Run Calcuation example:

One roof cap, two 90º elbow, and one 45º elbow used:

0ft + 9ft + 9ft + 5ft = 23ft used.

Deduct 23ft from 50ft, 27ft maximum available for straight duct run.

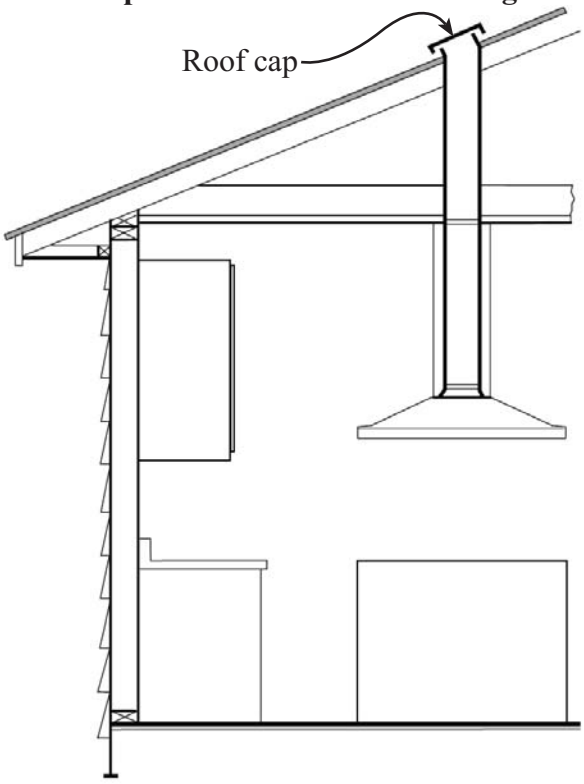
Venting Methods

- This island canopy range hood is factory set for venting through the roof or wall. For non-vented (re-circulating) installations, see ***Recirculating (Non-Vented) Kit*** on page 10.
- Vent work can terminate either through the roof or wall. To vent through a wall, a 90° elbow is needed.

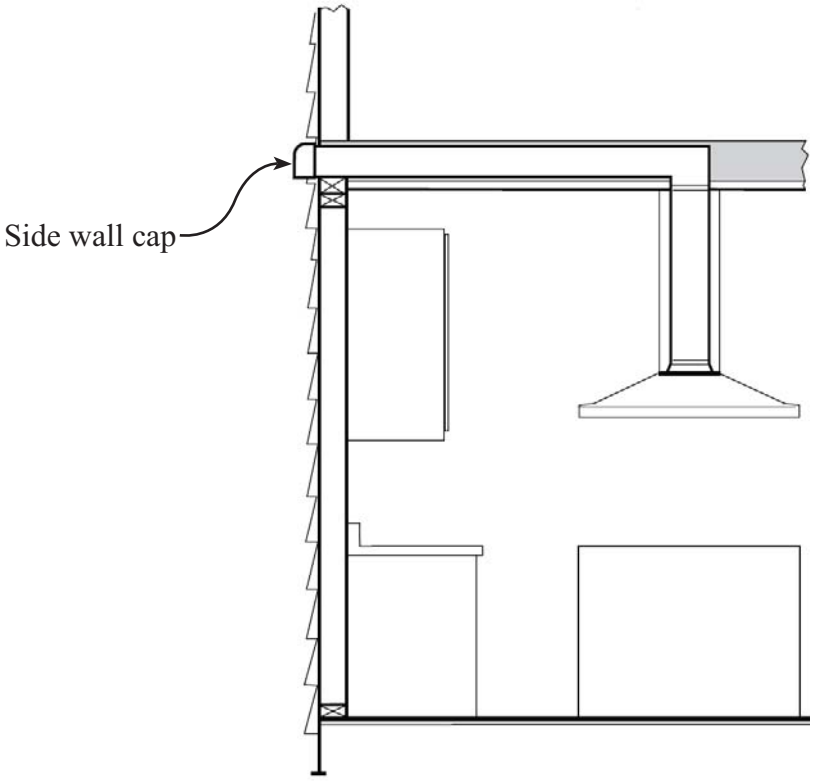
IMPORTANT:

- NEVER exhaust air or terminate duct work into spaces between walls, crawl spaces, ceiling, attics or garages. All exhaust must be ducted to the outside.
- Use metal/aluminum duct work only.
- Fasten all connections with sheet metal screws and tape all joints with certified Silver Tape or Duct Tape.
- Use caulking to seal exterior wall or roof opening around the cap.

Option 1: Vertical roof venting



Option 2: Horizontal wall venting



Ductless Conversion

- Ductless conversion is intended for applications where an exhaust duct work is not possible to be installed. When converted, the hood functions as a purifying hood rather than an exhaust hood. Fumes and exhaust from cooking is drawn and filtered by a set of charcoal filters. The air is then purified and re-circulated back within the home.
- We recommend to ALWAYS exhaust air outside of the home by employing existing or installing new duct work, if possible. Only when the exhaust option is not possible should you recourse to converting the hood into a purifying unit.
- When converted to be a “purifying” unit, a set of charcoal filters and an air-diverter are required in addition to its standard aluminum filter set. Available at http://www.euro-kitchen.com (Product ID: SV218-ACS-RECIR). The standard aluminum filters are intended to capture residue from cooking, the optional charcoal filters help to purify fumes exhausted from cooking, and the optional air-diverter redirects filtered clean air back to the house.

Charcoal Filter Installation

NOTE: The charcoal filters are preinstalled if you purchased the range hood with re-circulating kit from us.

1. Remove aluminum filters on hood.
2. Position the charcoal filters onto each side of the motor and turn until it locks. Re-install aluminum filters.
3. Charcoal filters must be replaced after 120 hours of use (or approximately every 2 to 3 months based on the average of 1 to 2 hours of daily cooking time). Available at http://www.euro-kitchen.com (Product ID: SV218-ACS-CF-KIT).

Electrical Requirements

IMPORTANT: Observe all governing codes and ordinances.

It is the customer's responsibility:

- To contact a qualified electrical installer.
- To assure that the electrical installation is adequate and in conformance with National Electrical Code, ANSI/ NFPA 70 — latest edition*, or CSA Standards C22. 1-94, Canadian Electrical Code, Part 1 and C22. 2 No. 0-M91 - latest edition** and all local codes and ordinances.

If codes permit and a separate ground wire is used, it is recommended that a qualified electrician determine that the ground path is adequate.
A 120-Volt, 60 Hz, AC-only, fused electrical supply is required on a separate 15-amp circuit, fused on both sides of the line.
DO NOT ground to a gas pipe.
Check with a qualified electrician if you are not sure that the range hood is properly grounded.
DO NOT have a fuse in the neutral or ground circuit.

IMPORTANT: Save this Installation Guide for electrical inspector's use.

The range hood must be connected with copper wire/plug only.
The range hood should be connected directly to the fused disconnect (or circuit breaker) box through flexible armored or non-metallic sheathed copper cable. A U.L. - or C.S.A. - listed strain relief must be provided at each end of the power supply cable.

Wire sizes (copper wire only) and connections must conform with the rating of the appliance as specified on the model/serial rating label. Wire sizes must conform to the requirements of the National Electrical Code ANSI/NFPA 70 — latest edition*, or CSA Standards C22. 1-94, Canadian Electrical Code Part 1 and C22. 2 No. 0-M91 - latest edition** and all local codes and ordinances. A U.L. - or C.S.A. - listed conduit connector must be provided at each end of the power supply cable (at the range hood and at the junction box).

Copies of the standards listed may be obtained from:

* National Fire Protection Association
Batterymarch Park
Quincy, Massachusetts 02269

** CSA International
8501 East Pleasant Valley Road
Cleveland, Ohio 44131-5575

Preparation

Advanced Preparations:

WARNING

Excessive Weight

Require three or more person to move and install this range hood. Spinal or other bodily injuries could occur if it is not followed.

1. Be familiar with the controls of the range hood by reading through ***Range Hood Operations,*** Page 12.
2. Place the range hood on a flat, stable surface. Connect the range hood to a designated standard outlet (120-Volt, 60Hz, AC only) and turn on the range hood. Verify all operations of the range hood by referring to ***Range Hood Operations,*** Page 12.
3. Place all supplied parts and required hardware on a flat, stable surface and verify the existence of all supplied parts listed on Page 4.
4. Carefully remove the white plastic protective coat from the chimney covers and range hood.

Preparations:

NOTE: To avoid damage to your hood, prevent debris from entering the vent opening.

1. Determine and mark the center line on the ceiling where the range hood will be installed. Make sure there is proper clearance within the ceiling or wall for exhaust vent.
2. Due to the weight and size of this unit, please make sure that the support system or framework being used is stable and secure in the wall.
3. Put a thick, protective covering over counter top, cook top or range to protect from damage or dirt. Remove any hazardous objects around the area when installing.
4. Mark the locations of the support mounting bracket holes, vent cutout (if used) and power supply cable cutout on the ceiling. Use drill and saber saw or keyhole saw to cut openings for power supply cable and vent (see ***Venting requirements*** and ***Electrical requirements***, Pages 6-8).
5. If venting to the outside install vent system (see ***Venting Requirements***, Page 5). Use caulking to seal exterior wall or roof openings.
6. Disconnect main electrical supply, prepare and run electrical wiring through ceiling or wall. Leave approximately 12” of electrical cord hanging from the ceiling. Do not restore power until wiring is completed.
7. Disconnect power cord, remove the aluminum filter by pressing on the latch toward the direction of solid arrow while holding the metal handle, gently pull the aluminum filter toward the direction of dashed arrow as shown in Figure 1.
8. Remove the grease cup by sliding it sideway, see Figure 2 for location of the grease cup.
9. Set aside the aluminum filters and grease cup until the range hood is properly installed.
10. *If the range hood comes with a glass canopy and has not already been mounted to the hood, loosen the four canopy screws and washers from the hood top, carefully place the canopy on the hood top, and loosely tighten the four canopy screws along with washers. DO NOT put excessive pressure against the glass.*

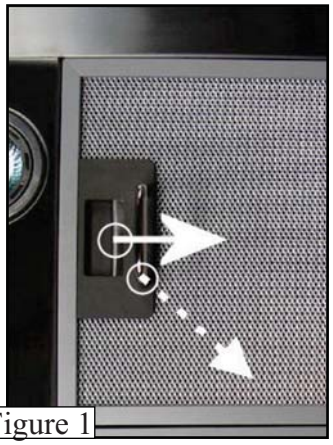


Figure 1

Figure 2

WARNING

Severe Injury

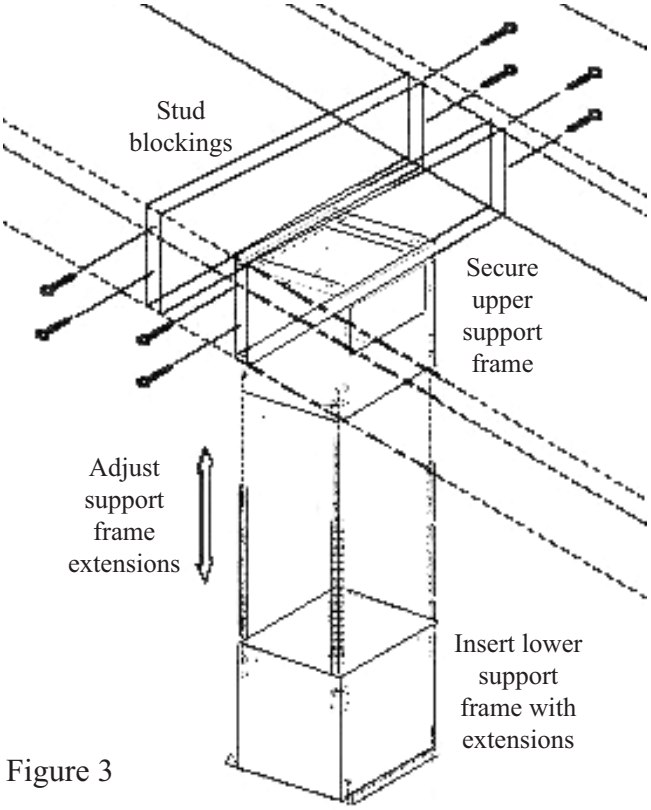
Rotating fan can cause severe injury. Stay clear of fan when motor is running.

Installation

WARNING
Hazard of electrical shock!
Do not perform service on an electrically live system. Disconnect the main electrical supply before servicing this device. Touching electrical connectors or other exposed electrical circuitry inside this range hood when they are energized could result in death, serious bodily injury, or property damage.

1. Align upper support frame with holes in ceiling. Mount the upper support frame to the ceiling using four "A" screws (for sheet rock only). Make sure that the upper support frame is securely fastened to the joist or support in the ceiling. Attach support frame to ceiling using anchors recommended for your type of ceiling:
   - Sheet rock ceiling: Attach support frame to ceiling joists or stud blockings if possible. If ceiling joists or stud blockings are not available, it is required to build a supporting structure behind the sheet rock for best weight support.
   - Concrete ceiling: Use designated screws (not provided).
   - Wood ceiling: Use at least 4" long wood screws (not provided).

2. ***Recirculating (Non-Vented) Kit:*** *If Re-Circulating Kit is not purchased, skip this step. Place the air diverter inside upper support frame so that its 6" round hole faces downward into the lower support frame and secure it with four "D" bolts. Be sure to let through the 12" of electrical cord hanging from the ceiling.*
3. Position the support frame extensions at the inside corners of the support frames, adjust and mark each support frame extension as necessary to achieve the proper height for the range hood to be set away from the cook top. (See ***Height and Clearance*** on Page 5 and *Installation Overview* on next page).
4. Fasten the support frame extension onto the lower support frame using four "B" bolts and "C" nuts as shown in Figure 3. Repeat this step for rest of the support frame extensions. IMPORTANT: Always use first and second holes on the support frame extensions.
5. Calculate the height of the duct tube and extend approximately 6 inches longer than required, connect the upper end of the duct tube to the vent system.
6. Position the lower support frame with support frame extensions to the upper support frame, fasten each extension with four "B" bolts and "C" nuts as shown in Figure 3.



Stud blockings
Secure upper support frame
Adjust support frame extensions
Insert lower support frame with extensions

Figure 3

7. Slide the upper chimney cover over the completed support frame and fasten with two "D" bolts to the upper support frame. (See Figure 3 for illustrations).
8. Slide the lower chimney cover around the lower support frame and around the upper chimney cover. Have second person to hold it in position. (See Figure 4).

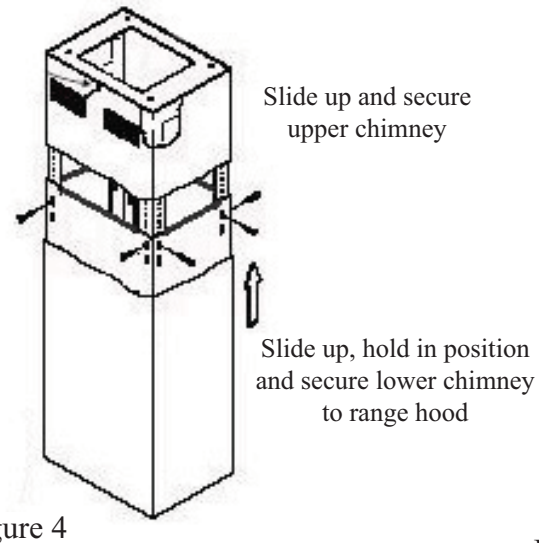


Figure 4

Installation (Continued)

9. Have a third person raise up and hold the island range hood in position, connect power plug to the 12” hanging electrical cord, and connect the duct work to the range hood.
10. Mount the hood to the lower support frame using four “B” bolts and four “C” nuts: Securely fasten two “C” nuts to two “B” bolts by reaching up from the underside of the hood. Repeat this step to secure the other side using two “C” nuts to two “B” bolts.
11. After all four “B” bolts and four “C” nuts securely fastened, connect the lower end of the duct tube to the hood and slide the lower chimney cover down carefully so that it sits on top of the hood.
12. Install grease cup and aluminum filters then check the operation of the range hood.

Installation Overview

(A)
Qty: 4 PCS

(D)
Qty: 4 PCS
(Optional with re-circulating kit. Pre-installed when kit ordered together with range hood)

(B)
Qty: 32 PCS

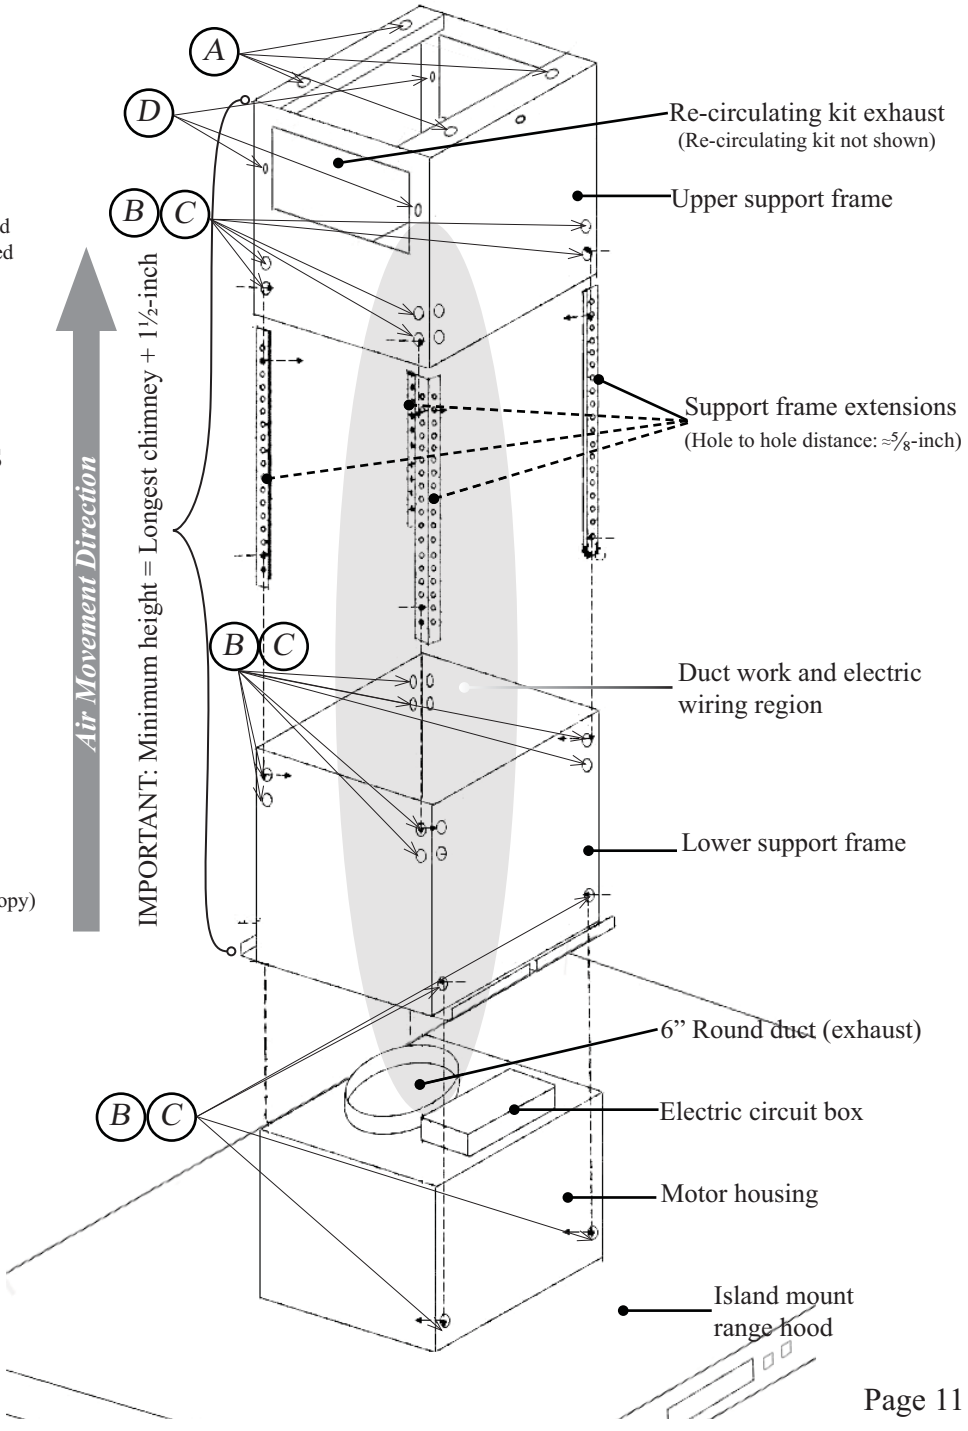
(C)
Qty: 32 PCS

Glass Canopy Screw
Qty: 4 PCS
(Optional with glass canopy)

Hex Key
Qty: 1 PCS
(Optional with glass canopy)

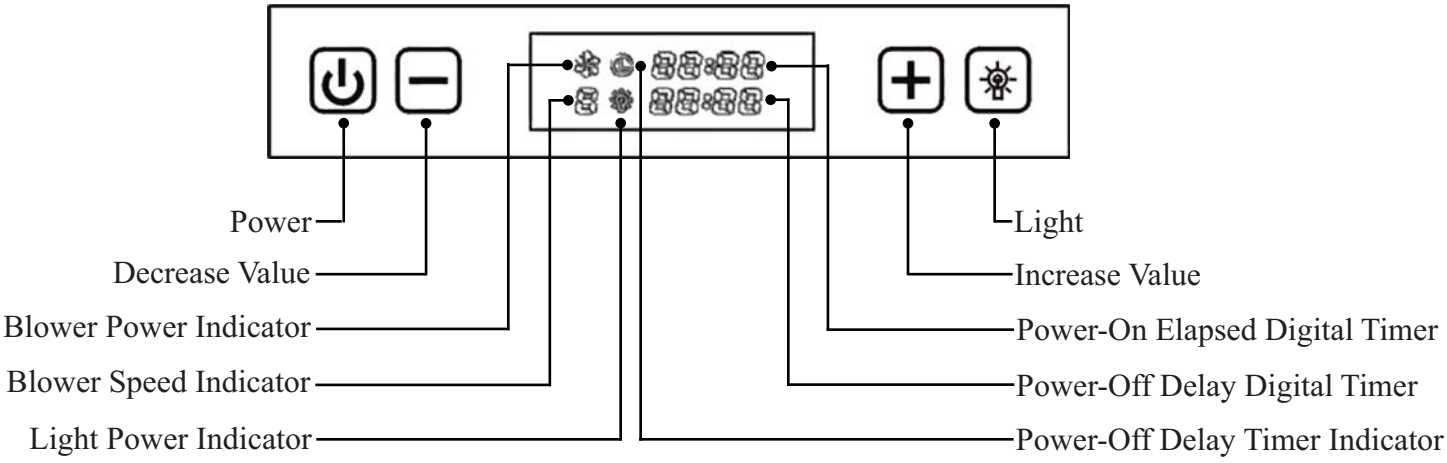
NOTE:
- (A) screws are designed for dry wall. Not to be used with any other types of walls.
- A distance of 28” to 31” is recommended* between stove top and the bottom of range hood.
- Always use first and second holes on the support frame extensions to secure lower support frame.

** Due to different ceiling height configurations, recommended height may not be applicable.*



Range Hood Operations

Control Panel Layout and Buttons Configurations:



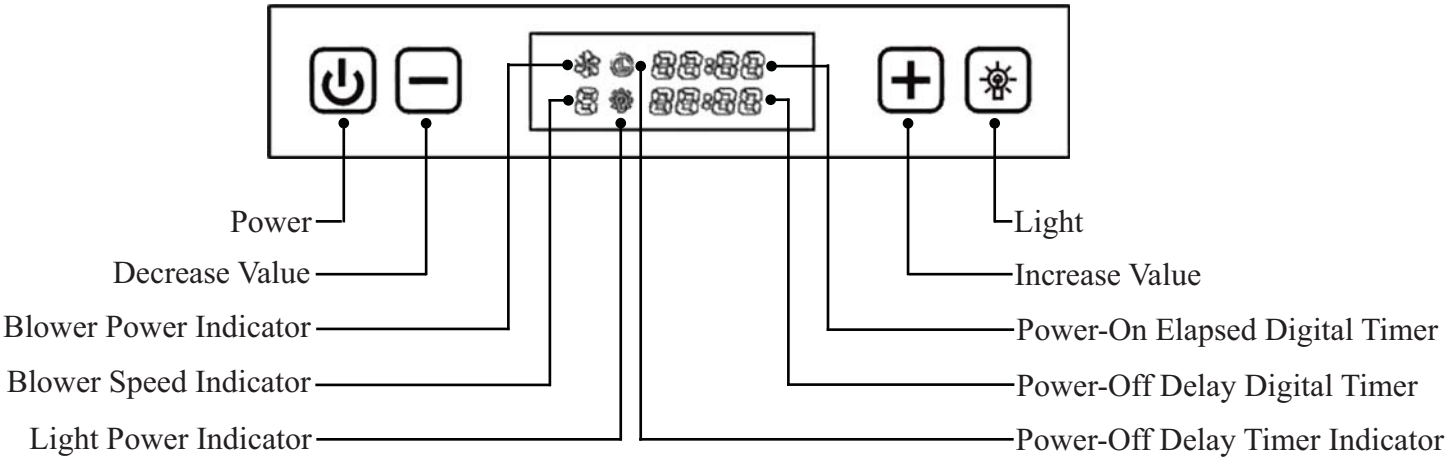
The island canopy hood is designed to remove smoke, cooking vapors and odors from the cook top area. For best results, start the range hood before cooking and allow it to operate several minutes after the cooking incomplete to clear all smoke and odors from the kitchen.

- Button functions:
  - Power: Power ON/OFF and activate power-off delay timer.
  - Decrease Value: Blower (motor) speed decrease, timer value decrease, and enter timer mode.
  - Increase Value: Blower (motor) speed increase timer value increase, and cumulative timer reset.
  - Blower Power Indicator: Lights up when blower (motor) is running.
  - Blower Speed Indicator: Shows current blower (motor) speed (1-6).
  - Light Power Indicator: Lights up when lights turned on.
  - Light: Turns ON/OFF and dim halogen lights.
  - Power-On Elapsed Digital Timer: Indicates the accumulated time the system is running.
  - Power-Off Delay Digital Timer: Indicates the length of time left for delay off function.
  - Power-Off Delay Timer Indicator: Lights up when auto-shutdown delay timer function is on.
- Controls:
  - Automatic cleaning reminder:
    - When blower (motor) starts to rotate, cumulative running time will be shown in *Power-On Elapsed Digital Timer*. This timer icon flashes when 30 hours is up and reminds user to clean the aluminum filter.
    - After cleaning the filter and when the motor is not in use, press and hold *Increase Value* button over 3 seconds to reset the timer. Please note that turning off the system will not reset the *Power-On Elapsed Digital Timer*.
  - Adjusting the blower (motor) speed:
    - Press *Power* button once to turn on the system. The *Blower Power Indicator* icon flashes showing that the blower (motor) is ready. *Decrease Value* button will decrease the speed of the blower (motor) from 6 to 1 (strongest to quietest). *Increase Value* button will increase the speed of the blower (motor) from 1 to 6 (quietest to strongest).
    - Press *Power* button once to turn off the system.

Note: The system saves user configurations, settings such as light, timer and blower (motor) speed will remain the same the next time it is turned on.

Range Hood Operations (Continued)

Control Panel Layout and Buttons Configurations:



- Controls:
  - Adjusting the timer function:
    - While the blower (motor) is not running, press and hold *Decrease Value* button over 3 seconds to enter timer mode. Adjust to desired period of delay off timer by pressing *Increase Value* or *Decrease Value* button (minimum 1 minute to maximum 15 minutes). This setting will be saved immediately.
  - Activating the timer function:
    - While the blower (motor) is running, press and hold *Power* button for over 3 seconds to activate delay off timer. Power-off delay indicator will lit up and power-off delay digital timer will begin to countdown, when it reaches zero, the blower (motor) will shut down.
  - Adjusting the light:
    - Press *Light* button once to turn on the lights, and once again to turn off the lights.
    - While the lights are off, press and hold *Light* button for over 3 seconds to dim the lights from low to high. Level of brightness will be stored in system's memory.

CAUTION: DO NOT touch the lights until switched OFF and cooled.

Note: Light settings are independent from other settings (including power-off delay) and lights has to be manually turned on or off.

Note: The system saves user configurations, settings such as light, timer and blower (motor) speed will remain the same the next time it is turned on.

Troubleshooting

WARNING
Hazard of electrical shock!
Do not perform service on an electrically live system. Disconnect the main electrical supply before servicing this device. Touching electrical connectors or other exposed electrical circuitry inside this range hood when they are energized could result in death, serious bodily injury, or property damage.

1. If the range hood or halogen light does not operate after installation:
   - Check if the range hood has been plugged in, make sure that all power has been turned back ON, fused not blown and all electrical wiring are properly connected.
   - Swap out light assembly to working ones to determine whether it is caused by defective bulbs. See *Replacing the light bulbs* on Page 17.
2. The range hood vibrates when the blower is on:
   - The range hood might not have been secured properly on to the ceiling or wall. Check with your installer
3. The blower or fan seems weak:
   - Check that the duct sized used is at least 6” or 3-1/4 x 10”. Range hood WILL NOT function efficiently with insufficient duct size. For example: 7” duct over 6” hole and loosely secured.
   - Check if duct is clogged or if damper unit (half-circular flapper) is not installed correctly or opening properly. A tight mesh on a side wall cap unit might also cause restriction to the air flow.
4. The lights work but the blower is not spinning at all, is stuck or is rattling.
   - The blower might be jammed or scraping the bottom due to shipping damage. Please contact us immediately.
5. The hood is not venting out properly:
   - Make sure the distance between the stove top and the bottom of the hood is within* 28” and 31” in distance. **Due to different ceiling height configurations, recommended height may not be applicable*.
   - Reduce the number of elbows and length of duct work. Check if all joints are properly connected, sealed, and taped.
   - Make sure the power is on high speed for heavy cooking.
6. Purpose of the slots/holes/openings near the top of the upper chimney:
   - These slots/holes/openings are used to exhaust cleaned air with optional re-circulating kit. If you did not install one, you do not need them.

NOTE: *For all other inquiries, please contact us. Our contact information can be found on Page 18.*

Use and Care Information

Operations:

- Read and understand all instructions and warnings in this manual before operating the appliance. Save these instructions for future reference.
- Always leave safety grills and filters in place. Without these components, operating blowers could catch on to hair, fingers and loose clothing.
- NEVER dispose cigarette ashes, ignitable substances, or any foreign objects into blowers.
- NEVER leave cooking unattended. When frying, oil in the pan can easily overheat and catch fire. The risk of self combustion is higher when the oil has been used several times.
- NEVER cook on "open" flames under the range hood. Check deep-fryers during use: Superheated oil may be flammable.

Cleaning:

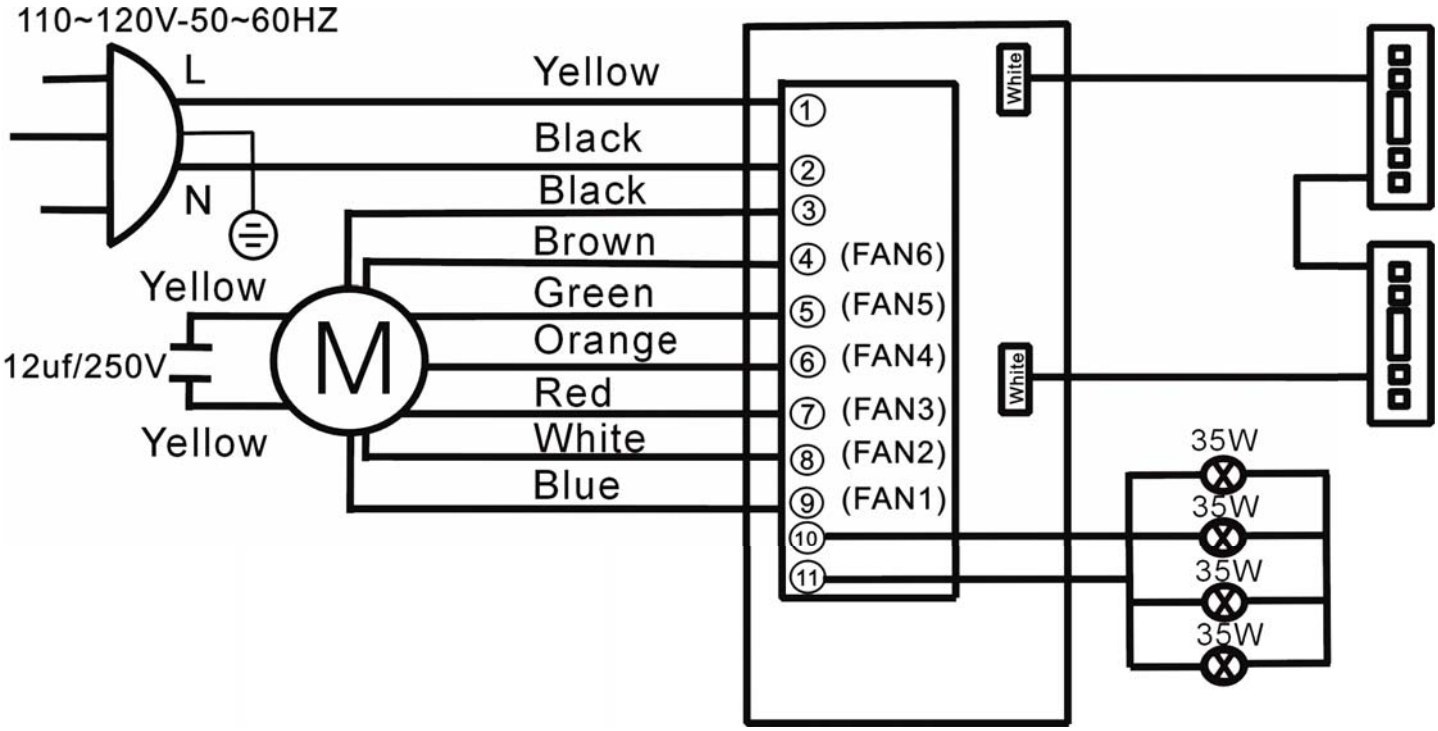
- The saturation of greasy residue in the blower and filters may cause increased inflammability. Keep unit clean and free of grease and residue build-up at all times to prevent possible fires.
- Filters must be cleaned periodically and free from accumulation of cooking residue (see cleaning instructions on Page 17). Old and worn filters must be replaced immediately.
- DO NOT operate blowers when filters are removed. Never disassemble parts to clean without proper instructions. Disassembly is recommended to be performed by qualified personnel only. Read and understand all instructions and warnings in this manual before proceeding.

Specifications

Specifications*:	
Body	Stainless Steel / Tempered Glass
Power Rating	120V / 60Hz (USA & Canada standard)
General Input Power	358 W (218W + 4x35W)
Motor Input Power	218 W
Motor Revolution	600 RPM (±10%) to 1800 RPM (±10%)
Levels Of Speed Control	6 Levels
Maximum Airflow	900 CFM
Air Pressure	320 pa
Noise Level (dB / sone)	Approximately 23 / 0.3 to 68 / 7.0 (Lowest to highest Speed)
Motor Type	Dual Chamber Ultra Quiet
Fan Type	Dual Centrifugal / Sirocco
Control Type	Dual Electronic Control Panels with LED Display
Filtration Type	Aluminum Filter with Reversible Handle
Illumination	35W 120V Maximum, Dimmable
Venting Size	Top, 6 inches Round
Interference Protection	Radio Frequency Interference Protected

* Subject to change without notice, please visit *http://www.euro-kitchen.com* for details.

Wiring Diagram



Maintenance

SAFETY WARNING: Never put your hand into area housing the fan while the fan is operating!

For optimal operation, clean range hood and all baffle/spacer/filter/grease tunnel/oil container regularly. Regular care will help preserve the appearance of the range hood.

Cleaning Exterior surfaces:

- Clean periodically with hot soapy water and clean cotton cloth. Do not use corrosive or abrasive detergent (e.g. Comet Power Scruv®, EZ-Off® oven cleaner), or steel wool/scoring pads, which will scratch and damage the stainless steel surface. For heavier soil use liquid degrease such as "Forumla 409®" or "Fantastic®" brand cleaner.
- If hood looks splotchy (stainless steel hood), use a stainless steel cleaner to clean the surface of the hood. Avoid getting cleaning solution onto or into the control panel. Follow directions of the stainless steel cleaner. **CAUTION: Do not leave on too long as this may cause damage to hood finish.** Use soft towel to wipe off the cleaning solution, gently rub off any stubborn spots. Use dry soft towel to dry the hood.
- After cleaning, you may use non abrasive stainless steel polish such as 3M® or ZEP®, to polish and buff out the stainless luster and grain. Always scrub lightly, with clean cotton cloth, and with the grain.
- DO NOT allow deposits to accumulate or remain on the hood.
- DO NOT use ordinary steel wool or steel brushes. Small bits of steel may adhere to the surface and cause rusting.
- DO NOT allow salt solutions, disinfectants, bleaches, or cleaning compounds to remain in contact with stainless steel for extended periods. Many of these compounds contain chemicals, which may be harmful. Rinse with water after exposure and wipe dry with a clean cloth.

Cleaning Aluminum Grease Filter / Stainless Steel Filterless Grill:

IMPORTANT: Drain oil from oil containers before oil and residue overflow!

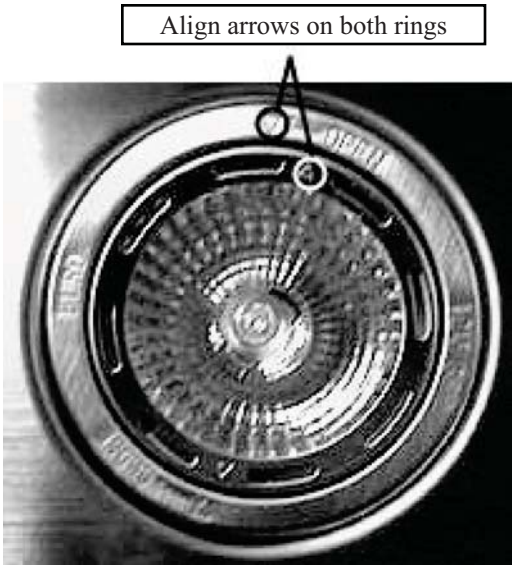
- The metal filters fitted by the factory are intended to filter out residue and grease from cooking. It need not be replaced on a regular basis but are required to be kept clean.
- Filters should be cleaned after every 30 hours of use.
- Remove and clean by hand or dishwasher. Spray "Formula 409®" or equivalent degreasing detergent and leave to soak if heavily soiled. Dry filters and re-install before using hood.

Replacing Filters:

- Should filters wear out due to age and prolonged use, replace with following part number:
  Product ID: SV218-ACS-AF/SF (Available at http://www.euro-kitchen.com)
- Note: Also replace damaged filter that has punctured or broken mesh, bent or broken frame.

Replacing the light bulb:

- This range hood uses halogen bulb: type (GU10) 35W 120V.
  Product ID: SV218-ACS-GU1035W
  (Available at http://www.euro-kitchen.com)
- Make sure the range hood is unplugged or turn OFF breaker.
- Make sure the lights are cool to touch, carefully align the arrow on the inner ring with the arrow on the outer ring where it says OPEN. The inner ring will loosen and the light bulb will be available for removal. Install a new halogen light bulb and reverse the steps.
- Turn ON breaker and range hood to test for operation.



WARNING

Hazard of Burns!

Light bulb become extremely hot when turned on. DO NOT touch bulb until switched off and cooled. Touching hot bulbs could cause serious burns.

Warranty

TO OBTAIN SERVICE UNDER WARRANTY:

You must present proof of original purchase date.

Please provide an original dated proof of purchase (sales receipt / invoice) in order to obtain service under warranty.

One Year Parts Warranty:

For one year from the date of original purchase, Euro-Kitchen, Inc. ("Euro-Kitchen") will provide free of charge, non-consumable replacement parts or components that failed due to manufacturing defects. Subject to the conditions and limitations set forth below, Euro-Kitchen will, at its option, either repair or replace any part of its products that prove defective by reason of improper workmanship or materials. Repaired parts or replacement products will be provided by Euro-Kitchen on an exchange basis, and will be either new or refurbished to be functionally equivalent to new. The consumer is responsible for all shipping costs. Consumable parts not covered by this warranty include but not limited to: Light bulbs, metal, aluminum and charcoal filters.

Who is Covered:

This warranty is extended to the original purchaser for products purchased for ordinary home use in the continental US. (Customer in Canada, Hawaii and Alaska, this warranty is limited).

This Warranty Will Be Voided When:

Product damaged through negligence, improper installation, accident, abuse, misuse, natural disaster, insufficient or excessive electrical supply, abnormal mechanical or environmental conditions, or any unauthorized disassembly, repair, modification, or failure to follow installation instructions. When product is used commercially or other than its intended purpose. Damaged because of improper connection with equipment of other manufacturers. Repaired or modified by anyone other than Euro-Kitchen's authorized agents. This limited warranty also does not apply to any product on which the original identification information has been altered, obliterated or removed, has not been handled or packaged correctly, has been sold as second-hand or has been resold contrary to the US export regulations.

What is Not Covered:

Consumable parts such as light bulbs, metal and charcoal filters. The natural wear of finish, and wear due to improper maintenance, use of corrosive and abrasive cleaning products, pads, and oven cleaner products. Chips, dents or cracks due to abuse, misuse, freight damage, or improper installation. Damage of product caused by accident, fire, floods or act of God. Euro-Kitchen is not liable for, and does not cover under warranty, any loss of properties or any costs associated with removing, servicing, installing, or determining the source of problems with Euro-Kitchen products.

This warranty is valid in the United States and Canada. It is non-transferable and applies only to the original purchaser and does not extend to subsequent owners of this product. Any applicable implied warranties, including the warranty of merchantability, are limited in duration to a period of express warranty as provided herein beginning with the date of original purchase at retail and, no warranties, whether express or implied, shall apply to this product thereafter.

To obtain warranty service, you may contact Euro-Kitchen, Inc., its dealer or distributor from which you purchased the Euro-Kitchen product. Please confirm the terms of your dealer's or distributor's policies prior to contacting. Typically, you must include product identification information, including model number and batch number (if applicable) with a detailed description of the problem you are experiencing. You must also include proof of the date of original retail purchase as evidence that the product is within the applicable warranty period.
